

# the one-two punch

## FOR SPIDER MITE ELIMINATION

### READ LABEL BEFORE USE!

#### SPIDER MITE EVOLUTIONARY DEFENSE

1. Spider Mites lay eggs when they are threatened - Doktor Doom kills them so they lay eggs before they die
2. Spider Mites in a Climate controlled indoor growing environment reproduce every 3-4 days as the temperature and humidity is high-these are ideal conditions for rapid reproduction
3. For complete eradication take all steps applying Doktor Doom Spider Mite Knockout thoroughly to the underside of the leaves followed up with a Doktor Doom Fogger
4. Due to this rapid evolution you should have complete success in eradication if you apply these products every 3-4 days x 3 to 4 times.

#### DOKTOR DOOM SPIDER MITE KNOCKOUT

1. Always apply in the dark-late at night or early in the morning-never in direct sunlight or with HID Lights On
2. Water your Plants before application
3. Be certain to remove any webbing that you see by hand prior to treatment-webs work as an umbrella and prevent sprays from getting through to the Plant
4. Spray the underside of the foliage from a distance of 2-3 feet away from the plant
5. Doktor Doom Spider Mite Knockout is equipped with a special spray valve that sprays upside down
6. Spray with short bursts 1-2 seconds at a time - a light mist is all that is required - DO NOT SOAK FOLIAGE

7. Dust mask recommended when spraying products in an enclosed environment
8. Insects must be contacted by the spray to be killed
9. Fog area with Doktor Doom Foggers after Spider Mite Knockout application
10. Wash your hands after using any Insecticide products
11. Doktor Doom Spider Mite Knockout is made with Natural Pyrethrin and is safe to use up to One day before Harvest
12. Natural Pyrethrin biologically degrades in a matter of hours after exposure to light, air flow and humidity - NO RESIDUALS
13. Pyrethrin is approved for Organic Gardening Programs (Restricted Uses) Refer to OMRI

#### INDOOR GROWING AREAS AND GREENHOUSE SANITATION TIPS

1. Always wear clean clothing when working in your growing environment
2. Be sure to keep these clothes clean-wash in hot water and dry in a warm dryer regularly
3. DO NOT ALLOW PETS OR FRIENDS into your growing environment - spider mites hitch hike and can be attached to both
4. Remove all dead foliage from growing area daily
5. If drawing "Fresh Air" into your growing environment be certain to treat the outside area where this air is coming from with Doktor Doom regularly
6. Keep everything clean this includes table tops, floors, walls, ceilings, shades, bulbs etc
